Terraonion announces MegaSD, a Mega-CD/Sega CD FPGA cartridge compatible with Mega Drive and Genesis consoles

Andorra la Vella, Andorra: Terraonion today announced the all new MegaSD cartridge for Sega Mega Drive and Genesis consoles. The MegaSD is an all-in-one FPGA cartridge that duplicates the Sega CD/Mega-CD hardware and allows owners to play these games back from a microSD card. The MegaSD also is a general purpose rom flashcart allowing the playing of Mega Drive and Genesis cartridge games. Features and benefits of the MegaSD include:

- World's First Mega-CD/Sega CD FPGA Optical Disc Emulator
- Plays both ISOS (bin+cue) and ROMS
- Compatible with all original and region free patched Mega-CD/Sega CD bios
- Supports Mega Drive/Genesis, Sega CD/Mega-CD, Master System and 32X games (requires 32X add-on)
- Fully Supports original Mega Drive and Genesis hardware (Nomad included)
- Fully compatible with Analogue Mega Sg!
- Easy to use interface for navigating your collection with screenshots, genre, year and description
- Save State support for Mega Drive and Genesis Cartridge games (8 slots)
- Built in cheat engine for Mega Drive and Genesis cartridge games
- Emulates all different Genesis/Mega Drive/Master System/32x cartridge mappers.
- Stores all different Genesis/Mega Drive/Master System/32x cartridge saves onto microSD card.
- Per game Mega-CD/Sega CD Backup RAM and Cartridge RAM stored into microSD card
- Master System FM Core
- In-Game menu for fast reboot and swapping games(Genesis/Mega Drive and Mega-CD/Sega CD)
- Enhanced Mega Drive games with CD audio and Mega-CD/Sega CD hardware (MSU1 like)
- 400GB Exfat microSD supported

MegaSD will be available starting today, at 250 Euros with shipping starting early August. For more information on MegaSD, visit www.terraonion.com.

Terraonion - A world class leader in FPGA based flashcarts and optical disc emulators.
